About IronVest

IronVest at a Glance

Founded in 2022

Headquartered in New York | R&D in Tel Aviv, Israel

Protecting 3M+ Direct Consumers

IronVest is an AI and machine vision based solution that fuses user identity with real-time actions, creating a first-of-its-kind continuous authentication experience that eliminates account takeovers, session hijacking, scams, first-party fraud, and emerging AI threats. In addition to true fraud prevention, IronVest removes frustrating MFA interruptions and significantly reduces fraud and authentication operational costs.

Founded by a strong leadership team from some of the world's leading cyber fraud and technology companies

Backed by leading venture capital firms

IronVest ActionID™

New MFA that Fuses Identity and Intent

A Next Gen Customer Experience

ActionID™ secures the irreversible moments so you can safely dream up new products and provide white glove services.

Comprehensive Fraud Protection

The action-level signal stops account takeovers, prevent scams, shuts down man-in-the-middle attacks, deepfakes, and first-party fraud.

Efficiency Without Alert Fatigue

Cut Operational Expenses by 80% reducing alerts and “yellow paths” scenarios that require manual reviews and simplify your fraud and authentication stack.

Account Opening

Transactions & Account Maintenance

The digital banking evolution driving a fragmented arms race

Customers demand 24/7 seamless security, but the current patchwork of fraud and authentication controls injects continual friction and out-of-band escalations.

I

Security paradigm shift –
from piecing together fragmented risk scores to
reconstructing the continuous human interaction

IronVest **ActionID™** – In-Action MFA Immune to Fraud

Real-time capture of the display that includes on-device live video, biometric verification, and user-witnessed inputs into a single signal.

Fraud Protection Without Gaps

Account Takeover (ATO) immunity including malware, RAT and social engineering

Digital banking and wallets

Deepfake & AI-based fraud for onboarding and in session authentication

Digital onboarding, wealth management communication, call centers

Imposter Scams prevention

Digital banking, wealth management communication, call centers, ATM, Branch/Teller

Card Not Present (CNP) fraud

3DS, Wallets, checkout

First Party fraud and abuse

Forensic evidence proves person, action, and intent, preventing false transaction claims

ROI beyond the fraud stack

POC with Tier-1 Bank projecting:

- Replacing ~4 fraud vendors
- Removing MFA and step-up tools
- Exposing \$10M of first-party fraud

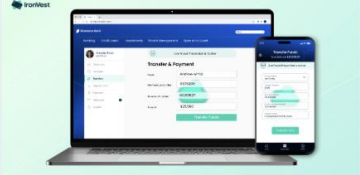

80% OPEX reduction

\$Millions in fraud prevented

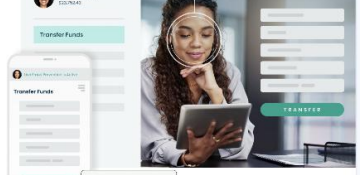

Demo

ATO & Session Hijacking Prevention

Continuous biometric authentication ensures only the verified account owner can access and transact, even if passwords are compromised or sessions are intercepted.

Zero-Fraud Identity-Linked Virtual Cards

IronVest Solutions

ACCOUNT TAKEOVER PREVENTION

Solution Overview

A single SDK that delivers biometric authentication combined with session monitoring and automatic data sealing.

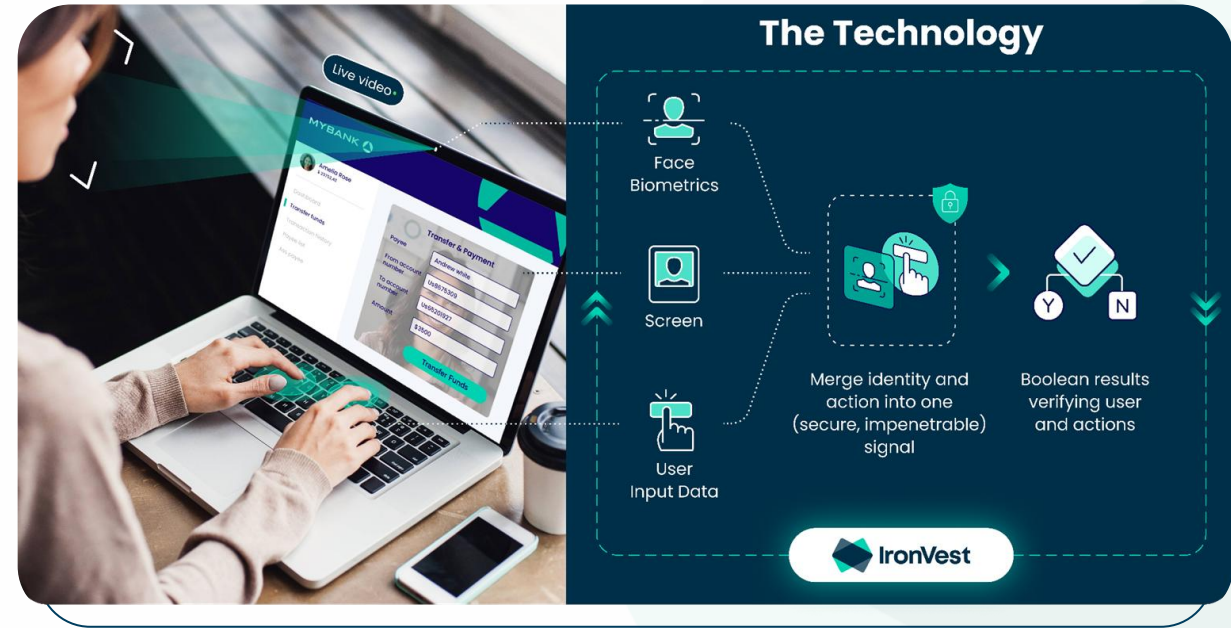

Ensures that only the authorized user can execute transactions and sensitive actions. This means faster, easier, more secure transactions for the bank's customers--and lower fraud rates.

How it works

- Combines biometric authentication with user actions into a single signal
- Provides a boolean fraud decision
- In-app invisible MFA
- Dashboard to manage passwordless orchestration and analyze audit trails
- Low code integration with single SDK

Benefits

- Total fraud prevention that prevents login and post login ATO fraud
- Significantly reduce detection-related OpEx
- Zero-interruption experience for users
- Eliminate 1st and 3rd party ATO fraud with digital audit trail
- Reduce fraud investigation efforts
- Simple integration, deployment, and adoption
- Single SDK provides zero-fraud biometric authentication across banking channels and businesses

CALL CENTER FRAUD PREVENTION

Solution Overview

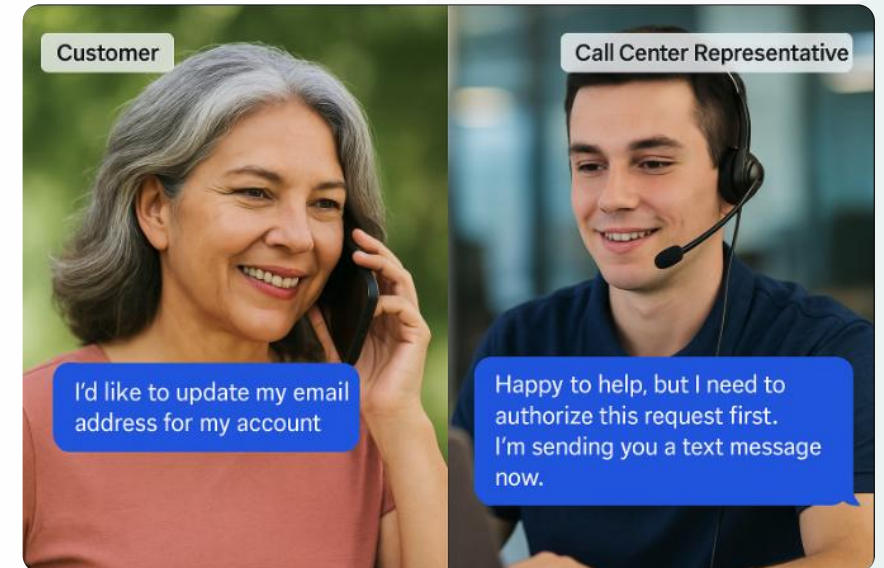

IronVest ActionID™ verifies who is on the call and what they're authorizing – returning a real-time yes/no decision instead of probabilistic scores. By validating the customer's biometric identity and the exact details of their request, contact centers can stop social-engineering attacks, ATOs, and AI voice-spoofing while reducing authentication friction and average handle time.

How it works

1. Customer connects to the contact center.
2. They receive a secure link to confirm identity and the requested action.
3. ActionID™ simultaneously captures biometric identity and action authorization.
4. If verified, the call proceeds; if not, the request fails.

Benefits

- **Eliminate fraud, not just detect it:** Stop ATO, scams, deepfakes, and social-engineering before they succeed
- **Reduce authentication time & handle time:** Remove cumbersome knowledge checks and MFA interruptions
- **Device-independent protection:** Biometric verification works across the customer's available device(s).
- **True cross-channel security:** Apply the same strong authentication across IVR/IVA, chat, web, mobile, and live-agent calls.
- **Conclusive fraud evidence:** Tamper-resistant documentation that links a verified person to a verified action.

SCAM PREVENTION

Solution Overview

Leverages our proprietary screen action biometrics to verify sender (client) and receiver (vendor) requests and identities, eliminating deepfake, BEC, and phishing attacks while preserving a seamless human touch.

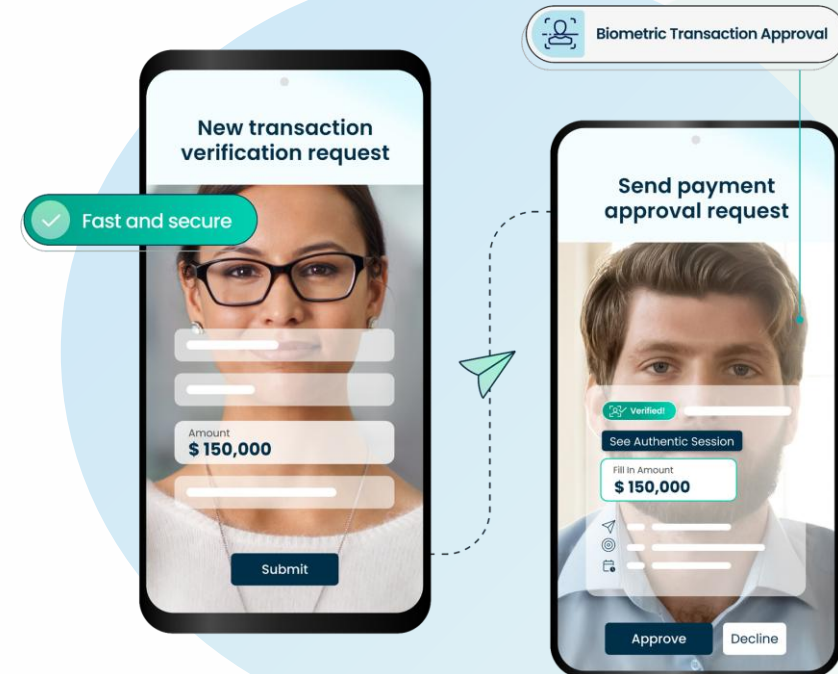

How it works

- Payee sends a identity and payment request verification magic link
- Requestor enters payment details while identity and actions are biometrically authenticated
- Secures both clients and vendors with multi-layered sender and receiver verification
- Authenticates and seals the transaction approval

Benefits

- Stop deep fake scams and social engineering before they happen.
- Secure both clients and vendors with multi-layered sender and receiver verification
- Flexible active or passive enrollment
- Frictionless customer experience - no MFA or KBA
- User-centric, non-device bound flexibility

Biometrics-authenticated sender and receiver identity verification

"UNLIMITED ZELLE" SOLUTION

Solution Overview

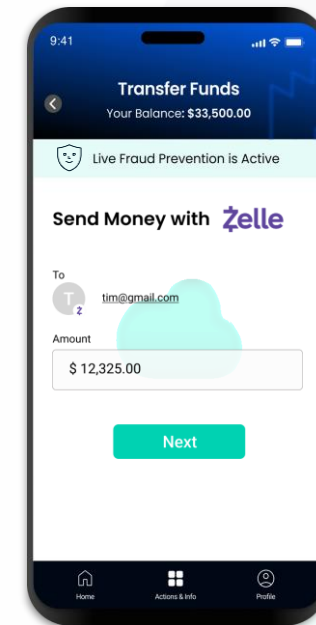

Leverages our proprietary screen action biometrics to verify originator (client) request and identity, as well as receiver's identity, eliminating imposter scams and account takeover attacks.

How it works

- Client is prompted to use Action ID when attempting to send funds through Zelle (based on FI policy, e.g. for new payees)
- Receiver (if high risk) completes web-based identity check
- Sender must approve verified recipient photo
- Authenticates and seals the transaction approval

Benefits

- Offer flexible Zelle payments to customers thanks to trusted and convenient protection
- Block account takeover attacks trying to use Zelle to move money out with biometric authentication for sender
- Eliminate imposter fraud attacks with recipient identity being confirmed by the sender
- Flexible implementation options

DEEPAKE-RESISTANT ACCOUNT OPENING

Solution Overview

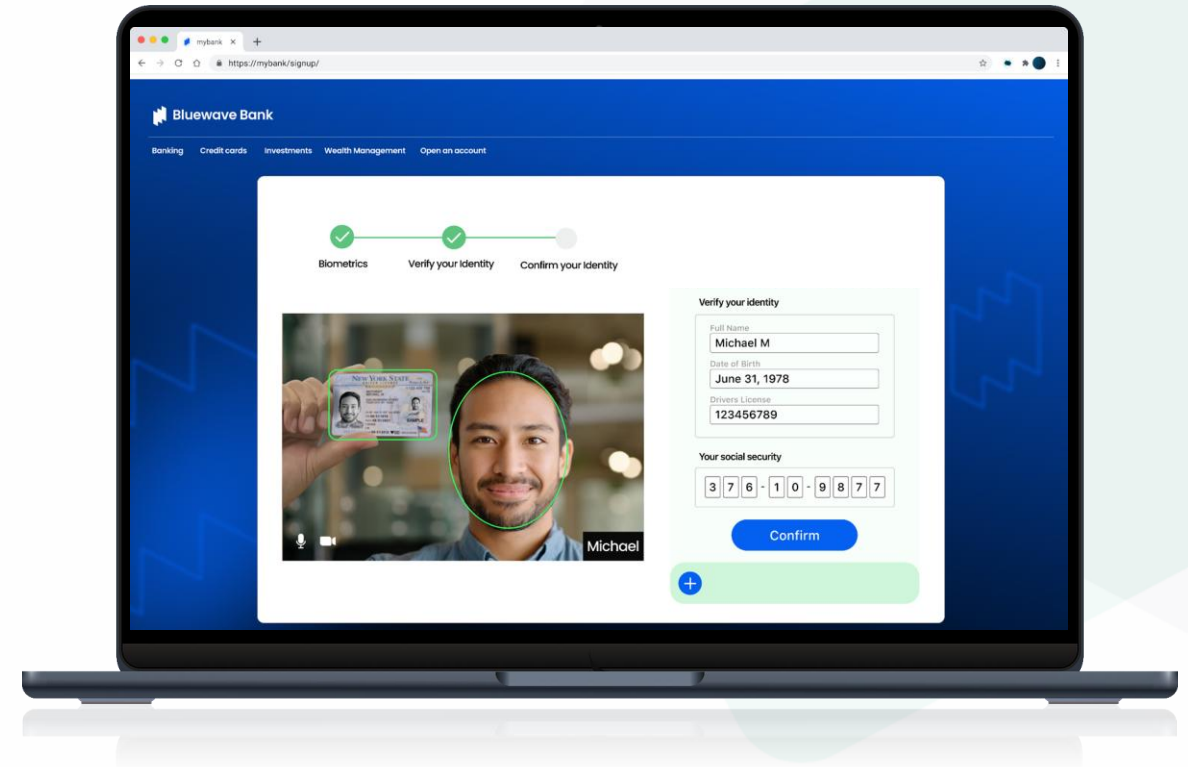

IronVest converts Onboarding from a chain of fragile steps into one atomic, verifiable action. The same signal simultaneously attests to who the applicant is and what they are approving.

How it works

- **Single, Inseparable Flow:** Liveness and doc verification happen in the same action, on the same screen, with the same facial “footprint”.
- **Biomteric and Action Binding:** Real-time screen capture, user-witnessed inputs, and live face biometrics with liveness are cryptographically bound and compared with the data received on the bank server side.
- **Boolean Results:** Instead of a collection of risk signals and fraud scores, IronVest provides a clear Yes/No Answer that enables to automate approve of decline account opening decisions.

Benefits

- Stops deepfakes at the source with multi-frame liveness and real-time identity binding
- Cuts fraud and manual review with a single, action-level decision
- Delivers a premium UX that increases convergence - no step-ups, no ping-pong between checks
- Increased customer satisfaction through simplified onboarding

Thank you!
